## Overview

---

How many lithium ion cells are in a battery pack?

Configured with three 18650 lithium-ion cells connected in series (3S) and a single parallel group (1P), this battery pack provides stable voltage output and reliable energy storage for a variety of portable and low-power applications.

What is a 3S lithium ion battery?

A 3S Li-ion battery is made up of three lithium-ion cells connected in series. These batteries are praised for their high energy density and long cycle life, meaning they can be recharged many times without significant loss of capacity.

What is a 3s 18650 battery pack?

A 3S 18650 battery pack combines three of these cells in series, resulting in a powerful and reliable battery. These packs are used in a variety of applications, from high-performance flashlights to electric bikes. The 18650 cells are known for their durability and high energy density, making them a solid choice for demanding tasks.

What is the difference between 3s4p & 3s5p lithium ion battery pack?

3S4P Li-ion battery pack- 4 pcs 3.7V cells paralalled and three groups of it in series makes 11.1V, total 12 pcs cells and a 3S PCM (protection circiut) are used. 3S5P Li-ion battery pack- 5 pcs 3.7V cells paralalled and three groups of it in series makes 11.1V , total 15 pcs cells and a 3S PCM (protection circiut) are used.

How does a 3S lithium battery work?

A 3S lithium battery consists of 3 cells connected in series, each with a nominal voltage of 3.7V. Here's how the charging works: 3S lithium batteries have a nominal voltage of 11.1V ( $3.7V \times 3$  cells). The fully charged voltage of a 3S lithium battery is 12.6V ( $4.2V$  per cell  $\times 3$  cells).

What voltage should a 3S lithium battery be charged to?

The fully charged voltage of a 3S lithium battery is 12.6V (4.2V per cell  $\times$  3 cells). Charging to this voltage is considered the maximum safe level for most lithium-ion chemistries, including Li-ion, LiFePO<sub>4</sub>, and LiPo. To avoid damaging the battery, it should not be discharged below 9.0V (3.0V per cell  $\times$  3 cells).
