

## SolarMax Energy Systems

# 5MWH liquid cooling replacement photovoltaic energy storage cabinet

## Overview

---

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

What is CATL 5MWh enerD?

On August 23, the CATL 5MWh EnerD series liquid-cooled energy storage prefabricated cabin system took the lead in successfully realizing the world's first mass production delivery. As the world's leading provider of energy storage solutions.

What are the advantages of 5MWh energy storage system?

Due to its outstanding advantages in cost reduction and efficiency improvement, especially in the current context of winning bids at low prices, the 5MWh energy storage system is expected to become the preferred technology route for large energy storage power stations next year. What are the advantages of the 5MWh+ energy storage system?

.

How long is a 5MWh liquid-cooling energy storage cabin?

The layout project for the 5MWh liquid-cooling energy storage cabin is shown in Figure 1. The cabin length follows a non-standard 20'GP design (6684mm length × 2634mm width × 3008mm height). Inside, there are 12 battery clusters arranged back-to-back, each with an access door for equipment entry, installation, debugging, and maintenance.

How many MWh can a 20 ft battery storage system produce?

The DC sides of the battery clusters are connected in parallel and then connected to the DC side of the PCS. The energy of a single cabin can reach more than 5MWh. Compared with the mainstream 20-foot 3.72MWh energy storage system, the 20-foot 5MWh energy storage system has a 35% increase in system energy.

How does a 5MWh+ battery cabin work?

According to industry experts, most of the 5MWh+ battery cabins adopt centralized topology and liquid cooling and heat management. There are 12 battery clusters in the whole cabin. The DC sides of the battery clusters are connected in parallel and then connected to the DC side of the PCS. The energy of a single cabin can reach more than 5MWh.
