5g base station installation contact

Overview

What is a 5G base station?

A 5G Base Station uses New Radio (NR) technology and is referred to as a gNodeB (gNb). gNodeB radios features Software Defined Radio (SDR) with various MIMO options including 2x2, 4x4, 8x8 and Massive MIMO options for higher capacities. Options for 5G deployment in Sub-6GHz bands as well as Millimeter Wave (mmWave) bands are available.

What is the new radio access technology for 5G?

The new radio access technology for 5G is called “NR” and replaces “LTE”, and the new base station is called gNB (or gNodeB), and replaces the eNB (or eNodeB or Evolved Node B). Please Contact Us.

Can a 5G base station be installed at ground level?

Many 5G base stations are being deployed at existing LTE sites. Each tower has a loading factor that defines the maximum weight of the radios and antennas that can be mounted. Due to legacy hardware on the tower, the radio may be required to be installed at ground level and only the antenna is tower mounted.

Will 4G base stations be upgraded to non-standalone 5G?

Upgrading 4G base stations by software to non-standalone (NSA) 5G will still require hardware changes. It will act as an interim, but it will still not satisfy the need for true 5G network architecture. The number of base stations needed increases with each generation of mobile technology to support higher levels of data traffic.

Does a 5G base station have a RF test port?

Many 5G base stations do not have an RF test port. For this reason, over-the-air (OTA) measurements must be made. Certain field spectrum analyzers offer a comprehensive suite of modulation quality measurements.

Should a 5G base station be able to withstand a hot climate?

Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions. Even in extremely hot climates, 5G components must remain reliable, stable and energy efficient to prevent downtime, malfunctions and reduction in lifespan.

5g base station installation contact

5G Distributed gNB

It forms a complete 5G base station together with the baseband unit (BBU), which is used in mobile communication cell cellular networking scenarios. The platform supports fiber optic ...
