ASEAN solar panel exports

Overview

Are solar panels imported or re-exported in Cambodia?

During the same period, the country's solar panel imports rose rapidly and doubled to USD272 million but the volume was significantly lower than solar panel exports (Figure 1). This trade pattern suggests that a substantial portion of Cambodia's solar panel exports may have been assembled domestically rather than imported and re-exported.

Which country exports the most solar panels in 2023?

Cambodia's performance stood out. Its solar panel exports to the U.S. in 2023 accounted for over 90 percent of the country's total solar panel exports. Remarkably, more than 90 percent of Cambodia's solar panel imports came from China in both 2022 and 2023.

Why should ASEAN invest in solar energy?

Furthermore, ASEAN's solar energy targets are also enabled by strategic partnerships and foreign investments. Through collaborations with global players, the region aims to leverage both expertise and resources, fostering a conducive environment for solar energy development across borders.

Is Southeast Asia ready for solar energy?

Positioned near the equator, Southeast Asia's solar irradiance levels was up 10 per cent in 2023, highlighting the region's potential for solar energy advancement. Southeast Asia's total solar and wind energy generation have surged from 4.2 terawatt-hours (TWh) in 2015 to over 50 TWh in 2022.

How much will US tariffs affect solar panel imports?

According to the US Department of Commerce, solar cell and panel imports will face varying countervailing duties — as high as 3,403.9 per cent for Cambodia, 799.5 per cent for Thailand, 542.6 per cent for Vietnam, and 168.8 per cent for Malaysia.
