Overview

HOUSTON/WASHINGTON, D.C., March 19, 2025 — The U.S. energy storage market set a new record in 2024 with 12.3 gigawatts (GW) of installations across all segments, according to the latest U.S. Energy Storage Monitor report released today by the American Clean Power Association (ACP) and Wood Mackenzie. How many GW of energy storage installations are there in 2024?

HOUSTON/WASHINGTON, D.C., March 19, 2025 — The U.S. energy storage market set a new record in 2024 with 12.3 gigawatts (GW) of installations across all segments, according to the latest U.S. Energy Storage Monitor report released today by the American Clean Power Association (ACP) and Wood Mackenzie.

Did energy storage connect 95% more to the grid in 2023?

The country's energy storage sector connected 95% more storage to the grid in terms of power capacity in 2023 than the 4GW ACP reported as having been brought online in 2022 in its previous Annual Market Report.

What types of energy storage are included?

Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolyzers are not included. Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

How many MW of storage was installed in 2024?

145 MW of community-scale, commercial and industrial (CCI) storage was installed in 2024, a 22% increase over the previous year. California, Massachusetts, and New York accounted for 88% of installed CCI capacity. Forecasted installations for 2025 have increased 7% over last quarter's forecast.

How much power does battery storage have in the US?

The cumulative output and capacity of battery storage installed in the US have reached 17,027MW and 45,588MWh, respectively. That meant an 86% increase in cumulative installed capacity in megawatts (power) and an increase of 83% in cumulative installed capacity in megawatt-hours (energy).

Which states have the most grid-scale storage installations in 2025?

Texas and California continue to lead the market, with 61% of the total installed capacity in Q4, while the remaining 39% was installed across 13 states, expanding storage deployment beyond the leading markets. Grid-scale storage installations are forecasted to reach 13.3 GW in 2025.
