

SolarMax Energy Systems

Albania Smart Solar Power System

Overview

Will Albania have a solar power project?

The Ministry of Infrastructure and Energy of Albania received four applications for solar power projects with a combined capacity of 235 MW. A proposed unit in Fier, the country's photovoltaics hub, would be the second-biggest in the country. Solar power accounts for 6% of electricity production in Albania.

What is solar investment in Albania?

Solar investment in Albania for the next 10 years refers to the country's strategic focus on expanding its solar energy capacity, driven by its advantageous geographical conditions and growing economic need for renewable energy sources.

How much does solar cost in Albania?

Albania ran a 300 MW solar tender last year. The Ministry of Infrastructure and Energy shortlisted nine bidders with an average price of €0.0513 (\$0.054)/kWh offered across 283.9 MW of capacity allocated in July. The country had deployed 163 MW of solar by the end of 2023, according to figures from the International Renewable Energy Agency (IRENA).

Where is Albania's second largest photovoltaic plant?

The company laid the cornerstone late last year for the 100 MW solar power system in the west of Albania. The site is near the port city of Durrës. One other PV plant is planned for expansion to 100 MW. Now another project of the same size is racing for the position of the country's second-largest photovoltaic facility.

Could a photovoltaic unit be the second-biggest in Albania?

A proposed unit in Fier, the country's photovoltaics hub, would be the second-biggest in the country. Solar power accounts for 6% of electricity production in Albania. More than half of the photovoltaic output is from the Karavasta

facility, the biggest of its kind in the Western Balkans. It has 140 MW in peak capacity.

How much solar power will Albania have by 2030?

Despite currently having an installed solar capacity of around 70 MW, there are ambitious projections indicating that Albania could add up to 800 MW by 2030, driven by a recent surge in investments totaling \$286.2 million over the past decade, including a record \$192.2 million in 2023 alone.
