Algeria base station wind power supply

Overview

Where is wind energy potential located in Algeria?

Apart from the El Golea region, more interesting wind energy potential is located in the southern part of Algeria. For the coastal zones and the high plains, the sites with wind energy potential up to 100 W/m² are located in the western part of the country.

How much electricity does Algeria generate a year?

Algeria currently generates a relatively small amount of its electricity (e.g., three percent or 686 MW annually), from renewable sources, including solar (448 MW), hydro (228 MW), and wind (10 MW).

How much wind does Algeria have?

For wind, Algeria has a 1,300-kilometer Mediterranean coastline with wind speeds of more than eight meters per second, in addition to winds coming off the surface of the Sahel in the South. Algeria aims to produce 27 percent of its electricity from renewable resources by 2035, mostly from solar power.

Will Algeria build a one-gigawatt solar energy project in 2021?

Towards this end, Algeria launched a tender for a one-gigawatt solar energy project in 2021, comprised of building five power generation sites ranging from 50 to 300 MW each.

What is Algeria's solar power supply chain?

The Algerian solar power supply chain grew significantly in the last decade and now seeks to add IPP development, engineering and design capabilities, EPC services, inverters manufacturing, storage solution manufacturing, universal certification expertise, and operations and maintenance services.

What is the power sector in Algeria?

Revised in May 2021, this map provides a detailed overview of the power sector in Algeria. The locations of power generation facilities that are operating, under construction or planned are shown by type – including liquid fuels, gas and liquid fuels, natural gas, nuclear, hybrid, hydroelectricity, solar (PV) and wind.
