

SolarMax Energy Systems

All-black module production

Overview

Do all-black modules lose efficiency?

But a 0.5% efficiency loss isn't especially noticeable to the average residential customer, so often these extensive production efforts aren't made on all-black modules.

Are all-black modules better than white-backsheet modules?

"All-black modules have a more aesthetically pleasing look but lose the benefit of reflection and light trapping, resulting in a lower photocurrent — up to 3% less than a white-backsheet module. Three percent less current means about 0.5% lower absolute efficiency."

What's the difference between Aptos solar's white- and black-backsheet modules?

Aptos Solar's white- and black-backsheet modules are identical in specs, except for that less-than-0.5% efficiency difference. Pham said that difference is moot when residential rooftop systems use microinverters.

All-black module production

Qcells Q.TRON BLK M-G2+ 435W Residential Solar ...

Featuring N-type technology and high efficiency, this all-black module is ideal for maximizing energy production on limited roof spaces.
