

## SolarMax Energy Systems

# Andorra Flywheel Energy Storage Project

## Overview

---

What is flywheel energy storage?

TEDx video presentation of the VOSS. ENERGIESTRO has been developing the technology of FLYWHEEL ENERGY STORAGE for several years, with the aim of reducing the high cost of battery energy storage, in order to increase the adoption of renewable energies.

What is energiestro flywheel?

ENERGIESTRO invented a flywheel made of prestressed concrete that will enable to reduce the high cost of energy storage (in comparison with batteries). – power supply to remote sites: telecommunications antennas, housing. The ENERGIESTRO flywheel is the ideal storage for large solar power plants in desert areas.

Can flywheel energy storage improve wind power quality?

FESS has been integrated with various renewable energy power generation designs. Gabriel Cimuca et al. proposed the use of flywheel energy storage systems to improve the power quality of wind power generation. The control effects of direct torque control (DTC) and flux-oriented control (FOC) were compared.

Are flywheel-based hybrid energy storage systems based on compressed air energy storage?

While many papers compare different ESS technologies, only a few research [152,153] studies design and control flywheel-based hybrid energy storage systems. Recently, Zhang et al. present a hybrid energy storage system based on compressed air energy storage and FESS.

Are composite rotors suitable for flywheel energy storage systems?

The performance of flywheel energy storage systems is closely related to their ontology rotor materials. With the in-depth study of composite materials, it is

found that composite materials have high specific strength and long service life, which are very suitable for the manufacture of flywheel rotors.

Can a flywheel energy storage system control frequency regulation after micro-grid islanding?

Arani et al. present the modeling and control of an induction machine-based flywheel energy storage system for frequency regulation after micro-grid islanding. Mir et al. present a nonlinear adaptive intelligent controller for a doubly-fed-induction machine-driven FESS.
