# Australian Industrial Park Energy Storage Industrial Park

## Overview

---

Will Pacific Green develop Australia's largest grid-scale battery energy parks?

Pacific Green, a global leader in renewable energy solutions, is proposing to develop one of Australia's largest grid-scale battery energy parks. The planned development in Portland, Victoria follows the company's first Australian battery project in South Australia, which was announced in November 2023.

What are energy park assets?

The energy park assets will be made up of single-story modular units similar in size to a 20 foot shipping container, with facilities for the energy and the associated infrastructure all located on-site. In total the facility will cover approximately 30 hectares of land, zoned for industrial use.

How does the Portland Energy Park fire safety system work?

The Portland Energy Park will come equipped with the latest lithium-ion battery technology incorporating several integrated fire safety measures. This will include both external monitoring and heat sensors as well as individual units within each battery container that are sealed and monitored with their own fire suppression systems.
