Overview

Why is Australia a good choice for energy storage systems?

Australia has an opportunity to influence further international thinking about the safety of energy storage systems. This also helps Australia's sovereign reputation as well as our international presence on the BESS front. Classification as critical infrastructure.

What happens if Australia doesn't have baseload power?

They suggest that without baseload power Australia is going to grind to a halt; that the loss of coal-fired power stations to renewable energy sources like solar, wind and hydro will damage electricity reliability and security. Coal-fired power stations used to run on a 'baseload' model of continuous operation. But what exactly is 'baseload' power?

.

Does Australia rely on overseas manufactured equipment for energy storage systems?

Australia is largely dependent on overseas manufactured equipment for energy storage systems. This guidance report consolidates learnings from the literature review, findings from stakeholder consultations, and broader industry knowledge to present a preliminary guide to approaching assessment of grid-scale BESS facilities moving forward.

Is Australia going to grind to a halt without baseload power?

Many of these reports have a sense of urgency, even panic. They suggest that without baseload power Australia is going to grind to a halt; that the loss of coal-fired power stations to renewable energy sources like solar, wind and hydro will damage electricity reliability and security.

How many electricity systems are there in Western Australia?

There are two separate interconnected systems in Western Australia (the South West Interconnected System (SWIS) and the North West Interconnected System (NWIS)) and 35 other smaller grids. The Northern Territory has three smaller separate electricity systems.

Does Pacific Energy have an off-grid power station?

With nearly 50 off-grid power stations in Western Australia alone, Pacific Energy has extensive experience designing BESS suitable even for Australia's harshest conditions. The company has progressively pursued the decarbonisation of these off-grid systems over the last five years by introducing renewables and BESS.
