Austrian power grid energy storage dispatch

Overview

How big is Austria's hydraulic storage power plant capacity?

In 2020, Austria had a hystorically grown inventory of hydraulic storage power plants with a gross maximum capacity of 8.8 GW and gross electricity generation of 14.7 TWh. This storage capacity has already played a central role in the past in optimising power plant deployment and grid regulation.

Does Austria have a market for energy storage technologies?

A study 1 carried out by the University of Applied Sciences Technikum Wien, AEE INTEC, BEST and ENFOS presents the market development of energy storage technologies in Austria for the first time.

Who owns Austrian power grid?

The main Austrian TSO is Austrian Power Grid AG owning 94% of the Austrian high voltage electricity grid. The high voltage electricity grid of APG (i.e. 380kV, 220kV and 110kV) has a length of approximately 6,700km. Verbund AG holds 100% of the shares in Austrian Power Grid AG.

Do Austrian states have a power grid?

Each Austrian federal state has its own power plants and its own power grid. Here too, supply and demand must be matched every single second of the day. However, the power generation and distribution structures in the Austrian states mean that one state may have an excess of supply while another has an excess of demand.

How many tank water storage systems are there in Austria?

A total of 840 tank water storage systems in primary and secondary networks with a total storage volume of 191,150 m³ were surveyed in Austria. The five largest individual tank water storage systems have volumes of 50,000 m³ (Theiss), 34,500 m³ (Linz), 30,000 m³ (Salzburg), 20,000 m³ (Timelkam) and twice 5,500 m³ (Vienna).
