

## SolarMax Energy Systems

# BESS Mode Analysis of Energy Storage Power Station

## Overview

---

Does Bess participate in power grid frequency regulation?

Therefore, this paper proposes a control method based on battery SOX, which is used for BESS to participate in power grid frequency regulation. The control method includes limiting the power and charging and discharging state according to battery SOS to achieve the purpose of system safety control.

Why do we need a Bess model?

Proper modeling is needed for the optimal coordination and dispatch of BESS. The BESS models would need to characterize the charging power consumed, discharging power supplied, state of charge (SOC) and ensure that the BESS remains within its power and energy limits.

How do you evaluate efficiency and demonstrated capacity of a Bess sub-system?

Evaluate Efficiency and Demonstrated Capacity of the BESS sub-system using the new method of this report. Compare actual realized Utility Energy Consumption (kWh/year) and Cost (\$/year) with Utility Consumption and Cost as estimated using NREL's REopt or System Advisor Model (SAM) computer programs.

What is Bess ion & energy and assets monitoring?

ion – and energy and assets monitoring – for a utility-scale battery energy storage system BESS). It is intended to be used together with additional relevant documents provided in this package. The main goal is to support BESS system designers by showing an example desi.

How does Bess work?

BESS operates in frequency regulation mode, selects the frequency regulation power curve of a day, and gets the frequency regulation power close to the actual field power through preprocessing for simulation. The SOH of 1-5

batteries are 0.8, 0.85, 0.9, 0.95 and 1.0 respectively.

What is the energy management strategy of Bess?

For the energy management strategy of BESS, on the one hand, it is necessary to accurately estimate the SOC of the battery pack in real time , , , , on the other hand, it is necessary to balance the energy of the battery pack to avoid the extreme conditions of overcharge and discharge.
