

### **SolarMax Energy Systems**

# **Base Station Power Management**

51.2V 300AH

#### **Overview**

Then, we provide an overview of the power-management approaches for BS, which consists of two major directions, i.e. BS power control and smart BS operation. The former is achieved at the equipment level, while the latter can be realized at the system/network level. How do I turn off base station power management?

Turning this feature ON ensures that your Base Stations power off when not in use to reduce power usage and extend their lifespan. Valve recommends turning this feature ON if you are not in a shared tracking space. You can turn this feature on/off at any time by navigating to SteamVR->Settings->Base Station->Power Management.

Does SteamVR have a base station power management feature?

SteamVR's Base Station Power Management feature is turned OFF by default. Turning this feature ON ensures that your Base Stations power off when not in use to reduce power usage and extend their lifespan. Valve recommends turning this feature ON if you are not in a shared tracking space.

How to reduce power-intensive base stations?

To address the issue of power-intensive base stations, proposed a combined approach involving base station sleep and spectrum allocation. This approach aims to discover the most efficient operating state and spectrum allocation for SBS to minimize power consumption and network disturbance.

Is there a base station Power menu in Steam VR?

There is no base station power menus anymore in steam VR as of last update. I hear them running and spinning all night. How do you get the power control to work in Steam VR anymore?

I can't get mine to shutdown anymore. There is no base station power menus anymore in steam VR as of last update. I hear them running and spinning all night.

Does the proposed method have more active base stations?

The results show that the proposed method has more active base stations than the method in in all the scenarios, because this paper proposes a solution to ensures the minimum data rate for a larger number of users, resulting in a reduced number of base stations that need to be shut down.

How does the SBS manage the base station sleep strategy?

The SBS manages the base station sleep strategy and power allocation based on the corresponding rate demands of all UEs. As a result, each SBS can evaluate all UEs comprehensively, thereby improving the transmission rate for each UE and achieving a higher overall achievable rate.
