Base station communication module

Overview

The , or BTS, contains the equipment for transmitting and receiving radio signals (), , and equipment for and decrypting communications with the base station controller (BSC). Typically a BTS for anything other than a will have several transceivers (TRXs) which allow it to serve several different and dif.

The base station's RF circuitry is housed in a small outdoor module known as a remote radio head (RRH) or remote radio unit (RRU). RRH performs all RF functions such as transmit and receive functionality, filtering and amplification.
