# Base station container

# Overview

What is a station container?

Although the construction of a Station Container is much like that of other Cargo Containers a Station Container is far too big to fit in a ship's cargo hold and is only used for storage and inventory management at stations. Cargo containers allow for extra storage while either being deployed in space, inside a cargo hold, or inside a station.

What is a base station in construction?

In construction, a base station is a receiver placed at a known point on a jobsite that tracks the same satellites as an RTK rover, and provides a real-time differential correction message stream through radio to the rover, to obtain centimeter level positions on a continuous real-time basis.
Why should you use basestation?

Never let your assets sit idle or go missing again – Basestation automatically tracks where your assets are, how long they've been out, and when they need to be moved. Reduce errors and wasted time going back-and-forth with your drivers – easily communicate information directly to your driver's smartphone or tablet.

Why do roll off haulers use basestation?

Roll off haulers use Basestation to track assets, communicate with drivers, and provide better customer service. Never let your assets sit idle or go missing again – Basestation automatically tracks where your assets are, how long they've been out, and when they need to be moved.
