Base station lead-acid battery charging

Overview

To charge a sealed lead acid battery, apply a direct current (DC) voltage between 2.30 and 2.45 volts per cell. This range supports float charging for maintenance and fast charging for quick replenishment. Adjust the voltage based on the battery's state of charge (SoC) after it discharges.

Base station lead-acid battery charging

Lead-acid Battery Charger Circuit

Before diving into the various charging strategies, it's essential to understand the basics of lead-acid battery charging. A lead-acid battery consists of lead plates immersed in an ...
