Battery cabinet communication high voltage system safety design

Overview

What is the hvbms reference design for battery-internal communication?

For battery-internal communication, the HVBMS reference design offers two possible architectures: isolated electrical transport protocol link (ETPL) or CAN/CAN FD. The CMU board features four of our latest ASIL D compliant battery cell controllers (BCC), together monitoring and balancing up to 56 cells.

What is a battery management unit (BMS)?

Figure 1 presents a typical BMS architecture containing a battery management unit (BMU), cell supervisor unit (CMU) and a battery junction box (BJB). A BMU typically has a microcontroller (MCU), which manages all of the functions within the battery pack.

What are the benefits of a high voltage BMS chip set?

Scalability: High-voltage BMS chip set solutions for a wide range of applications to reduce development cost and enable faster time to market.
Safety: High system safety level ensures proper operation of the battery at all times, protecting the passengers.

What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

How do ti battery monitors maintain a time relationship?

TI's battery monitors can maintain a time relationship by issuing an ADC start command to the cell monitor and the pack monitor. These battery monitors also support delayed ADC sampling to compensate for the propagation delay

when transmitting the ADC start command down the daisy-chain interface.
