

## SolarMax Energy Systems

# Belarus Wind Solar and Storage Integrated Project

## Overview

---

Is Belarus a energy import-dependent country?

Energy imports amount to 84.8% of the total primary energy supply and come primarily from a single source supplier, leaving Belarus as one of the world's most energy import-dependent countries in the world. Increasing deployment of renewable energy technologies would support Belarus' domestic energy supply.

How much will Belarus invest in a new wind energy farm?

The agreement on the sale of the pre-investment asset was signed between Belarus and the Turkish company on 30 August 2019 following its clearance from the side of the Belarusian Ministry of Antimonopoly Regulation and Trade. The estimated total investments into the new wind energy farm will be around US\$ 40 million.

How many solar energy installations are there in Belarus?

287 solar heating installations with total heat capacity of 3.9 MW th. Hydropower resources in Belarus are deemed scarce, though there are opportunities for small hydro in the northern and central parts of the country.

What energy resources does Belarus have?

Belarus does not have significant local energy resources, apart from renewables. Fossil fuels currently make up more than 90% of the energy mix in Belarus, with natural gas taking the lion's share. Power generation is also predominantly fossil fuel-based, with very limited integration of renewable sources.

Is Belarus building its largest wind farm?

Belarus is one step closer to building its largest wind farm and reaching its 2030 renewables target. Turkey-based construction company GURISH (Gurish Construction & Engineering Co. Inc.) was selected for investing into the

construction of a 25 MW wind farm near the village of Veleshkovichi in Liozno district of Vitebsk region in Belarus.

What is the solar power potential of Belarus?

Solar power potential is significant, mainly in the south and southeast of the country. In terms of global horizontal irradiation (GHI) and direct normal irradiation (DNI), most of Belarus receives only 1 100 kilowatt hours per square metre (kWh/m<sup>2</sup>) to 1 400 kWh/m<sup>2</sup> of GHI, and around 1 000 kWh/m<sup>2</sup> of DNI.
