Benin Wind-Solar Energy Storage Power Station

Overview

How can bioenergy contribute to the energy sector in Benin?

In addition, the Vossa hydroelectric power plant of 60.2 MW is to be built with an annual production capacity of 188.2 GWh. An additional hydroelectric plant is planned to be installed in Bétérou to increase the national electricity production in Benin . Bioenergy can also play a crucial role in the energy sector in Benin.

How much energy does Benin produce?

From 114 gigawatt hour (GWh) in 2010 to 1062.8 GWh in 2020, the energy output of self-producers and public power plants increased, with 810 GWh produced by public thermal power plants alone and 71.9 GWh by Benin's portion of Nagbeto's hydraulic production .

Does wind energy contribute to the electrification of Benin?

Although hydroelectricity, biomass and especially PV technologies play an increasingly important role in the electrification of Benin, recent studies have shown that wind energy technologies can also contribute. Non-electrified rural and peri-urban localities have favourable wind potential in coastal Benin.

What is the wind potential of Benin?

The theoretical wind potential of Benin is estimated to be 322 MW, with a wind speed at 10 m ranging from 3 to 6.1 m/s in the coastal zone and from 1 to 2 m/s in the country's north .

What is Benin's current energy situation?

This section provides information on Benin's current energy situation with energy demand-and-supply scenarios. According to the International Renewable Energy Agency (IRENA), 41% of Benin's population currently have access to electricity.

How does Benin get electricity?

The country's electricity supply is provided through two main sources, namely national production and imports. The Electricity Community of Benin (CEB), which is a mixed society between Benin and Togo, is responsible for providing electrical power to Benin.
