Bhutan Multifunctional Energy Storage Power Supply Procurement

Overview

What is Bhutan's energy supply?

Bhutan's energy supply primarily relies on electricity, fuel-wood, coal, and diesel. Electricity is the largest contributor, with a shift towards increased usage over the years. Fuel-wood usage has decreased, while bio-gas, solar energy, and limited-scale wind energy have gained traction as alternative sources.

What is the Bhutan energy data directory?

The Bhutan Energy Data Directory is a valuable resource for policymakers, researchers, and anyone interested in the energy sector of Bhutan. It provides a wealth of data and information on various aspects of Bhutan's Energy Sector, including energy production, consumption, and distribution.

How much solar power does Bhutan have?

Solar Energy According to the Renewable Energy Resource Assessment 2015, Bhutan has a theoretical potential of 3,706,328 MW for solar photovoltaic power generation based on solar irradiance.

Why is the industry sector important in Bhutan?

Overall, the Industry Sector in Bhutan is vital to the country's economic growth, and both large and small businesses play an important role. Optimizing energy consumption and promoting competitiveness in the Sector should be a priority for the government and businesses alike.

Which industries consume the most electricity in Bhutan?

Electricity is the primary fuel input in Bhutan's Industry Sector, with the ferro-alloys, steel, and cement-based industries as the major consumers. In contrast, other industries such as sawmills, briquetting, packaging, poly-products, wire, and marble account for less than 0.5 percent of the total electricity consumption (i.e., 6.6 GWh per year).

How has the power sector changed in Bhutan?

Over the last ten years, there have been significant transformations in the Power Sector of Bhutan, both in its structure and policies, driven by ongoing reform processes. Bhutan has a substantial hydropower potential, which is estimated to be 37,000 MW. Out of this, 33,000 MW is considered to be technoeconomically feasible.
