Botswana New Energy Charging Power Supply

Overview

How much electricity does Botswana need?

The average electricity demand for Botswana is at 850 megawatts (MW), against a generation capacity of 893 MW. Demand of electricity is projected to grow to over 1200 MW by 2030. Additional energy is imported from South Africa. Botswana generates 48% of its power and imports 52% from the Southern African Power Pool (SAPP).

What is the price of electricity in Botswana?

Botswana, June 2022: The price of electricity is 0.096 U.S. Dollar per kWh for households and 0.114 U.S. Dollar for businesses which includes all components of the electricity bill such as the cost of power, distribution and taxes.

Why does Botswana need a secure electricity supply?

There is a need to improve the security of power supply to support higher productivity. The country's national electricity access rate increased from 62.6% in 2017 to 81.5% in 2020, in line with Vision 2036 that targets universal access by 2030. The average electricity demand for Botswana is at 850 megawatts (MW), against a generation capacity of 893 MW.

Does Botswana still import electricity?

Botswana still imports electricity, with annual imports decreasing from 3,088,080 MW in 2010 to 1,527,697 MW in 2015.

Why is Botswana achieving energy self-sufficiency?

According to a new report by Statistics Botswana, the growth underscores the country's strides towards energy self-sufficiency that is driven primarily by enhanced output from its key power stations.

What is the power sector in Botswana?

Revised in April 2025, this map provides a detailed view of the power sector in Botswana. The locations of power generation facilities that are operating, under construction or planned are shown by type – including liquid fuels, gas and liquid fuels, coal, hybrid, hydroelectricity and solar.
