

## SolarMax Energy Systems

# Cambodia outdoor power supply parameters

## Overview

---

What are the main sources of electricity in Cambodia?

Major sources of local power generation are hydro and coal, and minor sources include diesel, wood, and biomass. In addition to local power generation, Cambodia also buys electricity from neighboring countries, especially during the dry season.

How is Cambodia transforming its energy sector?

Cambodia is undergoing a significant transformation in its energy sector, balancing economic growth with sustainability. The government is implementing energy efficiency policies, expanding renewable energy sources, and modernizing infrastructure to reduce electricity costs and improve accessibility.

Will Cambodia stop coal power plant investments after 2024?

The government has pledged to cease new coal power plant investments after 2024 and prioritize renewable energy, aligning with its Power Development Master Plan (PDP) 2022-2040. In March 2023, Cambodia launched the Principles for Permitting the Use of Rooftop Solar Power, ensuring transparency and accountability in solar energy adoption. FACT.

Is Cambodia a good country to build a power plant?

Cambodia's electrification rate is the second-lowest among South East Asian countries. Cambodia plans to increase its power generation capacity by building hydropower and coal-fired plants by 2025, which can contribute to improve self-sufficiency of power.

How much money does Cambodia need to build a power plant?

The Cambodian government has stated in its PDP that it will need \$9 billion of investment to develop new power plants and expand the national grid, of which \$2.5 billion has been approved between 2022 and 2025. Opportunities

exist for power generation and transmission equipment.

How much electricity does Cambodia have in 2022?

In 2022, Cambodia's total installed capacity amounted to 4,495 megawatts (MW), while 1,030 MW of power was imported from Thailand, Vietnam, and Laos. The Electricity Authority of Cambodia (EAC) predicts that the total installed capacity will increase to 4,945 MW of electricity in 2023.
