

## SolarMax Energy Systems

# Cambodia solar power system cost

## Overview

---

The cost of solar photovoltaic (PV) systems has dropped by over 80% in the last decade. In Cambodia, utility-scale solar can now be developed for under \$0.06/kWh, making it cheaper than diesel or coal. How much does solar cost in Cambodia?

Installation of rooftop PV is heavily penalized in Cambodia with solar arrays currently charged a monthly capacity fee – around US\$0.07/kWh for larger systems and \$0.84/kWh for smaller systems, according to the report “Position paper on renewable energy in Cambodia” by the European Chamber of Commerce in Cambodia (EuroChamb).

Does Cambodia have solar power?

Solar power capacity has been on a sharp ascent in Cambodia recently, increasing at a 10% annual rate from less than 1% of national generation capacity, however. Some 400-MW of solar-fueled power capacity is now connected to the national grid, according to the Department of Mines and Energy.

How much solar power does Phnom Penh need?

Phnom Penh needs some 400 megawatts. We will increase the energy generation capacity by coal-fired power plants,” the Premier was quoted in news reports. Solar power capacity has been on a sharp ascent in Cambodia recently, increasing at a 10% annual rate from less than 1% of national generation capacity, however.

How many energy projects are coming to Cambodia?

The Cambodian Cabinet approved four energy projects this past April, a US\$231 million hydroelectric power and three solar power projects with a combined, rated, maximum power capacity of 140 MW. The latter are expected to come online and dispatch power to the national grid by 2020 and 2021 in four different provinces.

Will Cambodia halve solar capacity?

The southeast Asian country is currently applying a monthly capacity fee on rooftop PV systems and the government may halve it in an effort to spur more solar installs. Several more hurdles, however, should be removed to ensure further growth. Cambodia's total installed PV capacity totaled 376.8 MW at the end of 2021. Image: shankar s./Flickr.

Will solar PV improve Cambodia's power system?

Modelling shows that Solar PV will yield significant economic benefits for Cambodia over conventional (Thermal and Hydropower) generation technologies. Five scenarios for the development of Cambodia's power system from 2020-2040 were modelled. They replaced some conventional plants with a higher uptake of Solar PV.
