Overview

Will a \$42 million energy storage project be built at Camp Pendleton?

California today approved a \$42 million grant to International Electric Power to build a long-duration energy storage project at Marine Corps Base Camp Pendleton in San Diego County. The project will provide electricity to the statewide grid and backup power to the base for up to 14 days in the event of power outages.

Why do we need battery storage projects at Camp Pendleton?

Battery storage projects like this one at Camp Pendleton are vital to building a reliable and resilient electric grid in the face of climate extremes. Governor Gavin Newsom.

How much energy does Camp Pendleton's Energy Reliability center provide?

Governor Gavin Newsom The project, to be installed at the Camp Pendleton's Haybarn Energy Reliability Center, will initially provide 6 megawatts (MW)/48 megawatt hours (MWh) of long-duration energy storage. Plans call for the system to later be expanded to a 50 MW/400 MWh installation.

What is a SAGE base camp energy management system?

The SAGE base camp energy management system is a prototype built upon a federally developed software system known as the Decision Support for Operations and Maintenance (DSOM) system).

What is a base camp energy management system?

A base camp energy management system enables central monitoring and control of vital base camp equipment and functions. It can feature automated load reduction schemes and reduced energy consumption in shelters by an average of 85% compared to tents, with superior temperature stability. PV array is one of its components.

How can a smart microgrid reduce base camp energy consumption?

Implementing a smart microgrid in combination with energy conservation measures and renewable energy sources can help reduce base camp energy consumption by 49%–84%, depending on the camp size and location.
