

## SolarMax Energy Systems

# Can I use an inverter for 12V power conversion

## Overview

---

Yes, you need an inverter to run standard appliances on a 12V battery. Most household appliances use alternating current (AC), while a 12V battery provides direct current (DC). An inverter converts the DC from the battery into AC power. What is a 12V DC power inverter?

This is where a power inverter comes in. Definition and Working Principle A 12V DC power inverter is a device that converts low-voltage direct current (DC) power from a 12V battery (such as a car battery or deep-cycle battery) into 120V alternating current (AC) power, making it suitable for household appliances and electronic devices.

Do you need a 12 volt inverter?

Inverters are cool devices that turn 12 volt battery power into 110V or 220V AC power. Do you own an RV?

Read our post on converters, inverters and inverter chargers [Do You Need A 12V Inverter?](#)

Inverters are common for camper conversions but they are not necessary for every build.

What is a power inverter?

Power inverters, or simply 'inverters', are transformers that will convert a DC current into an AC current, allowing you to run higher voltage equipment from a battery or other DC power source.

What is the difference between a 100W & 12V inverter?

This 100W pure sine inverter has a peak surge of 2000W along with a continuous 1000W of power. The 12v inverter has a digital display that indicates battery capacity, output voltage and DC indicator. All of these things give you practical information for running your electronic system in the most efficient way possible.

Should I use a 1200 watt inverter for a 12V DC system?

This means that for 12V DC systems, you generally shouldn't be using larger than a 1200 Watt inverter. These are safety recommendations that we are passing on from electrical forums, not hard rules. AC wiring is much more efficient than low voltage DC.

Should I use an inverter to power USB chargers?

You can also see why it would be unwise to use an inverter to power USB chargers as these could be run directly from a 12V DC source and not suffer the energy loss in the conversion from DC, to AC and back to DC again.

## Can I use an inverter for 12V power conversion
