

## SolarMax Energy Systems

# Can a 3KW inverter in the UK use lithium batteries

## Overview

---

Should you use a lithium-ion battery for a home inverter?

A lithium-ion battery for a home inverter can significantly enhance your home's energy storage capabilities. This translates to more reliable power during outages and better management of renewable energy resources like solar panels. Lithium-ion batteries require less maintenance and have a longer lifespan compared to traditional batteries.

Can you run a 3000 watt inverter on one battery?

You need 4 Lithium batteries in series to run a 3,000W inverter. If you use lead-acid batteries, you need 12 batteries with 4 in series and 3 strings in parallel.  
Can I run a 3000 watt inverter on one battery?

You can but it's not recommended because you will reduce the battery lifespan, or the BMS will stop the discharge.

Which battery should I use for my inverter?

When it comes to powering your inverter, there are a few alternative options to consider aside from lithium batteries. While lithium batteries have gained popularity due to their numerous advantages, they may not be the right choice for everyone. One alternative option is lead-acid batteries.

Can a solar inverter be used with a lithium battery?

Integrating a solar inverter with a lithium battery can take your renewable energy setup to the next level. This combination allows for better energy storage, improved efficiency, and greater resilience during power outages. LiFePO4 batteries are particularly well-suited for solar applications because their thermal stability and long cycle life.

How many batteries do you need for a 3,000w inverter?

If we put 4 batteries in series we have one 48V 100Ah battery. The c-rate of

lead-acid is 0.2C. We can draw  $100\text{Ah} \times 0.2\text{C} = 20\text{Amps}$ . That's not enough to power the 3,000W inverter. We saw previously that we need 62,5A if we have a 48V system. That means we need three parallel strings of 4 batteries in series for a total 12 batteries.

Which battery is best for a 1000 watt inverter?

Lead-acid batteries have a C-rate of 0.2C, while lithium (LiFePO4) batteries have a higher C-rate of 1C. 12V for inverters below 1000W. 24V for 1000-2000W inverters. 48V for 2000-4000W inverters. We need to satisfy two criteria before we can tell you what battery you need. These are:
