

## SolarMax Energy Systems

**Can a grid-connected inverter  
be used without being  
connected to the grid**

## Overview

---

Yes, a hybrid inverter can work without a grid connection! These inverters are quite versatile, designed to operate with both grid and off-grid setups. Essentially, they manage power from solar panels, the grid, and batteries. How do off-grid solar inverters work?

They only produce what the loads need so they don't push power past the meter into the grid. I use several ATSS (automatic transfer switches) to connect my off-grid solar to the house. When the PV -> battery charges up enough to turn on the Inverter - the Inverter power flips the ATSS from grid to inverter.

How do grid-following inverters work?

Traditional "grid-following" inverters require an outside signal from the electrical grid to determine when the switching will occur in order to produce a sine wave that can be injected into the power grid. In these systems, the power from the grid provides a signal that the inverter tries to match.

How do I connect my off-grid solar to my house?

I use several ATSS (automatic transfer switches) to connect my off-grid solar to the house. When the PV -> battery charges up enough to turn on the Inverter - the Inverter power flips the ATSS from grid to inverter. When the batteries run down and the inverter goes off, the ATSS automatically switch back to grid.

How does a grid forming inverter work?

Grid-forming inverters can start up a grid if it goes down—a process known as black start. Traditional "grid-following" inverters require an outside signal from the electrical grid to determine when the switching will occur in order to produce a sine wave that can be injected into the power grid.

What are grid services inverters?

For instance, a network of small solar panels might designate one of its

inverters to operate in grid-forming mode while the rest follow its lead, like dance partners, forming a stable grid without any turbine-based generation. Reactive power is one of the most important grid services inverters can provide.

Can a PV Grid be used as a stand-by?

Yes. Its an \*off-grid\* way to consume all PV generated power but yet use the grid as stand-by. If the grid were to go down - to have power 24/7 I would manage my loads carefully so that the system never depleted the battery enough to turn off the inverter.

## Can a grid-connected inverter be used without being connected to t

---

### Can you run a grid tied inverter without sending power back to the grid

In general, you can't connect a regular grid tie inverter to something like a UPS or Generator. The inverter will measure the circuit and find that it's not low enough impedance, and shut down for ...
