

## SolarMax Energy Systems

# Can photovoltaic panels generate electricity that can be fed into the grid

**FLEXIBLE SETTING OF  
MULTIPLE WORKING MODES**

## Overview

---

Can solar panels be fed to the electric grid?

While energy from solar panels can be fed to the electric grid to support clean power and reliable delivery, the current grid configuration needs some improvement for the two distribution infrastructures to work seamlessly together.

Why do solar panels need to be connected to the grid?

The simple answer is that remaining connected to the grid allows your home to draw additional power when solar panels can't generate enough electricity, including nights and cloudy days.

Can a solar panel system generate a lot of electricity?

While solar panel systems can generate a lot of electricity and add it to the grid, they can't do so all the time. When the sun isn't shining, energy production decreases, so there's no way to just 'turn on' more solar energy like you can with fossil fuel electricity generation.

Why do solar panels need a grid-tie inverter?

When excess electricity from solar panels flows back into the grid, it undergoes an important conversion process through inverters to ensure compatibility with the grid's AC system. This synchronization, facilitated by grid-tie inverters, guarantees a smooth integration of solar power without disruptions.

Should I connect my solar panels to my local energy grid?

By connecting your solar panels to your local energy grid, you essentially become part of a much larger, community-wide power system. This means that instead of exclusively relying on your own panels for power, or remaining off-grid entirely, you can both contribute to and benefit from this collective energy resource.

## How do solar panels generate electricity?

Photons from sunlight strike the solar panels' photovoltaic cells, creating a flow of electrons and generating direct current (DC) electricity. However, to use this electricity in homes and businesses and feed it back into the grid, it must be converted into alternating current (AC) electricity.

## Can photovoltaic panels generate electricity that can be fed into the
