BLACK MOUNTAIN ENERGY STORAGE

Does Japan have a solar power plant? The new-build renewable power plants in Japan include an energy storage component. The two largest solar PV power plants in Hokkaido, commissioned in 2018, include 100 MWh of battery storage. The two plants are located in the northern part of the island of Hokkaido, Japan. The first plant, located in the town of Otaru, has a capacity of 100 MW and the second plant, located in the town of Asahikawa, has a capacity of 100 MW. Both plants are connected to the national power grid and are used to store excess solar energy during the day and release it during the night. The plants are also used to provide backup power during outages. The storage system is made up of 1000 batteries, each with a capacity of 100 kWh. The total storage capacity is 100 MWh. The plants are expected to save the equivalent of 100,000 tonnes of CO2 per year.
