

SolarMax Energy Systems

Canadian Industrial Energy Storage Subsidy

Overview

The federal government offers the Clean Technology Investment Tax Credit, providing up to 30% coverage for renewable energy equipment and infrastructure investments. This includes solar panels, wind turbines, and energy storage systems. What types of energy storage are available in Canada?

There are three main types of energy storage currently commercially available in Canada: Storage is playing an increasingly important role in the electricity system by improving grid reliability and power quality, and by complementing variable renewable energy sources (VRES) like wind and solar.

Who is energy storage Canada?

About Energy Storage Canada: Energy Storage Canada is the only national voice for energy storage in Canada today. We focus exclusively on energy storage and represent the full value chain of energy storage opportunities in our own markets and internationally.

What is the fastest growing energy storage technology in Canada?

BESS is the fastest growing energy storage technology in Canada and is also the dominant storage technology in terms of capacity and number of sites. All but four projects proposed to be commissioned by 2030 are battery storage, with two CAES and two PHS projects also proposed.

Should long-duration energy storage be added to the Canadian ITC?

To further differentiate the Canadian ITC, an adder for Long-Duration (8 Hours+) Energy Storage (LDES) should be implemented. Long-duration storage is especially critical for achieving net-zero goals, however current revenue mechanisms in Canadian energy markets do not sufficiently value long-duration assets.

Are Tesla products eligible for energy storage incentive?

Tesla products are not eligible. The Government of B.C. and BC Hydro are taking action to preference Canadian goods in our rebate programs going forward and to exclude, where practicable, U.S. produced goods. As of March 12, 2025, Tesla products are not eligible for Energy Storage Incentive offer.

How can Canadian companies benefit from solar energy?

Leading Canadian companies are already capitalizing on these opportunities. Manufacturing firms report average energy cost reductions of 40% after implementing solar solutions through the Industrial Energy Management Program, while commercial property owners have secured up to \$500,000 in federal grants for building retrofits.
