China-Africa energy storage battery exports

Battery String-S224

- 1C Charge/Discharge
- Easy configuration and maintenance
- Power supply can be single battery string or parallel battery strings

Overview

How much battery material does China Import & Export?

China imported almost 12 million short tons of raw and processed battery minerals, accounting for 44% of interregional trade, and exported almost 11 million short tons of battery materials, packs, and components, or 58% of interregional trade in 2023, according to regional UN Comtrade data.

How can Africa support the battery value chain?

Regionalizing the value chain: The 2021 Africa Continental Free Trade Agreement (AfCFTA) offers a unique opportunity for African countries to collaborate across the value chain, localizing production and enhancing cost competitiveness. Government Support: African governments are implementing policies to support the battery value chain.

Can Africa export LFP batteries to Europe?

African countries, particularly Tanzania and Morocco, could competitively produce and export LFP batteries to Europe by 2030 at USD 68-72/kWh. This could generate USD 10-15 billion annually and create 22,000-25,000 jobs, rivaling global manufacturers like China, Indonesia, Europe, and the US.

Could African countries refine materials for lithium battery production & export?

African countries could refine materials for lithium battery production and export to the US and EU. Refining could be in countries that are currently mining raw materials required for battery cell production or have a plan to start by 2030. These include:

4. Presence of local battery demand or assembly
5. Presence of required talent
- 6.

Why is China a major producer of Li-ion batteries?

China is a major producer of Li-ion batteries and has streamlined supply chains, enabling efficient component procurement. Companies like CATL and

BYD are prominent players in the Chinese battery market The US has seen significant growth in energy storage demand.

Can Africa produce a Gigafactory battery?

A gigafactory requires a capex of ~USD 1 bn to produce 10-15 GWh batteries per year; African countries could produce LFP battery cells and export to the EU market. Countries that could produce battery cells cost competitively (e.g., Morocco, Tanzania).
