

SolarMax Energy Systems

Colombia has the largest number of photovoltaic and telecommunication battery cabinets

GRADE A BATTERY

LiFePO₄ battery will not burn when overcharged, over discharged, overcurrent or short circuit and can withstand high temperatures without decomposition.

Overview

Why are photovoltaic systems important in Colombia?

The implementation of photovoltaic systems in Colombia has enabled 2% of the population in areas that do not have access to electric energy to meet their lighting, refrigeration and leisure needs, allowing them to expand their capacities and improve their quality of life. The systems that have been installed are mainly focused on the rural sector.

How much electricity does Colombia produce?

Colombia's installed electric power generation capacity currently stands at 17,771 MW, with hydro accounting for 68 percent, gas and coal-fired power plants accounting for 31 percent, and the remaining one percent from wind and solar units. The country's energy matrix is clean but highly dependent on climatic conditions to generate hydro power.

What is the solar energy potential in Colombia?

The potential of solar energy at a global level in Colombia is 4.5 kW h/m² /day and the area with an optimal solar resource is the Península de la Guajira, with 6 kW h/m² /day of radiation, surpassing the world average of 3.9 kW h/m² /day. In the referenced link , there is an interactive map of the radiation indices in Colombia by IDEAM.

Is solar energy a problem in Colombia?

Taking into account that Colombia is mostly a desert area, what was presented above confirms the deficit of photovoltaic development in the ZNIs, that underutilize the solar resource and the great territorial extension. 4. Future picture of the solar energy.

Will Colombia build a hydrogen value chain?

With abundant natural gas reserves and the largest coal producer in Latin America, Colombia is focusing on blue hydrogen production as a base from

which to start building the hydrogen value chain. In 2022, Colombia published its roadmap for offshore wind development, part of a broader plan to wean the country off hydropower and fossil fuels.

How much hydrogen will Colombia produce in 2021?

In 2021, Colombia's Ministry of Mines and Energy presented its Hydrogen Roadmap. Its stated goals were to reach between 1 and 3GW of electrolysis capacity in 2030 and produce 50 kilotonnes of blue hydrogen from new methane steam reforming plants and the capture and storage of carbon in existing facilities.
