

SolarMax Energy Systems

Communication base station inverter grid connection and station startup process

Overview

How do I configure an inverter?

The configuration is transferred to all inverters in the system. The system password assigned via the communication device is also the password for the user interface of the inverter. Commission the inverter (> Commissioning the Inverter). The initial configuration of the inverter is made via the communication device.

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

How do I configure a sunny inverter?

Commission the inverter (> Commissioning the Inverter). The initial configuration of the inverter is made via the communication device. The configuration is transferred to the inverter and the settings of the inverter are overwritten. Deactivate the Webconnect function of the inverter via the Sunny Portal.

What is the reconnection time of inverter to the grid?

According to requirement in IEC standards, the reconnection time of inverter to the grid should be within the range of 20 to 300 seconds.

How do I configure the SMA grid guard?

Log into the user interface. Select the inverter configuration option. Please note that the SMA Grid Guard code for changing the grid-relevant parameters must be available after completion of the first ten feed-in hours or installation assistant. You can request the SMA Grid Guard code via the Online Service

Center.

What happens if a PV Grid connection fails?

If the first connection to the grid fails, the second connection to grid will initiate under the condition that the PV input voltage reaches 220V and the reconnecting process takes up 60 seconds.
