Communication base station power control

Overview

Why is power control important in a base station?

A Base Station serves multiple mobile subscribers (MSs) within its coverage area. Power control is crucial for optimal performance in these systems due to several factors: Maintaining Signal-to-Noise Ratio (SNR) at the receiver for reliable communication.

What is a base station controller?

Base station controllers (BSCs) are integral to the mobile telecommunications infrastructure, providing essential management and control functions that ensure efficient network operation. They handle the allocation of radio channels, which is crucial for reducing interference and optimising the use of available spectrum.

What are the components of a base station?

Power Supply: The power source provides the electrical energy to base station elements. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. **Baseband Processor:** The baseband processor is responsible for the processing of the digital signals.

What is a base station controller (BSC)?

The evolution of technologies in base station controller (BSC) architecture reflects the rapid advancements in mobile telecommunications. Initially, BSCs were designed to support 2G networks, focusing on basic voice and text services.

How to reduce power-intensive base stations?

To address the issue of power-intensive base stations, proposed a combined approach involving base station sleep and spectrum allocation. This approach aims to discover the most efficient operating state and spectrum allocation for

SBS to minimize power consumption and network disturbance.

Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

Communication base station power control

Power consumption based on 5G communication

This paper proposes a power control algorithm based on energy efficiency, which combines cell breathing technology and base station sleep technology to reduce base station energy ...
