

## SolarMax Energy Systems

# Composition of Australia s outdoor energy storage system

### Product Details

## Overview

---

Australia's current storage capacity is 3GW, this is inclusive of batteries, VPPs and pumped hydro. Current forecasts by AEMO show Australia will need at least 22GW by 2030 – a more than 700 per cent increase in capacity in the next six years. How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

What is Australia's current storage capacity?

The current climate Australia's current storage capacity is 3GW, this is inclusive of batteries, VPPs and pumped hydro. Current forecasts by AEMO show Australia will need at least 22GW by 2030 – a more than 700 per cent increase in capacity in the next six years.

Can energy storage improve Australia's electricity supply?

Australia's electricity supply needs to reach a minimum of 50% renewable energy by 2030 and zero emissions well before 2050 to effectively tackle climate change. Energy storage technologies are a vital complementary technology to renewable energy enabling Australia to transition to a clean, reliable, affordable electricity grid.

What are the Australian energy statistics?

The Australian Energy Statistics is the authoritative and official source of energy statistics for Australia and forms the basis of Australia's international reporting obligations. It is updated annually and consists of historical energy consumption, production and trade statistics.

Which energy storage technology is best for Australia's energy needs?

The CEC said emerging LDES technologies coupled with the energy storage systems in place, would be the best suite to appropriately manage Australia's needs. In March this year, the ARENA held an Insights Forum which covered energy storage and technologies that can bring system security to the grid.

What is South Australia doing with energy storage?

As a result, South Australia is already pursuing a number of energy storage projects including the Tesla-Neoen battery that began operating in December last year, solar thermal power with storage and potentially the world's second pumped hydro plant using seawater.

## Composition of Australia s outdoor energy storage system
