

## SolarMax Energy Systems

# Containerless solar installation

## Overview

---

How do I install a solar system?

Once the system has been designed and your solar kit has been purchased, you'll need to figure out how to install it. You have two options: hire a local installer or install the system yourself. In our experience, people who live off the grid love to take the hands-on approach and opt for a DIY installation.

Can I install my own off-grid Solar System?

Installing your own off-grid solar system is possible, and many people successfully do it themselves. However, whether you should take the DIY route depends on your comfort level with electrical systems, building codes, and safety protocols.

How do I ship a solar system to unbound solar?

Choose a sealant that is designed to work with your roof material. After your system arrives, there is a 24-hour window from delivery to submit shipping claims to Unbound Solar. Unpack your system immediately when it arrives to check for damage or missing parts. Find a clean, open space where you can unbox and inspect your equipment.

Can I install a ground-mounted solar system on my roof?

If you find that your roof is not fit for a PV system, you may be able to install a ground-mounted solar system if there's enough available space on your property. Finally, your solar installation must be approved by a representative from your AHJ and electric utility before it can be activated and interconnected to the local energy grid.

How long does it take to install a solar system?

Following permitting approval, your solar system can legally be installed on your property. For most homeowners, physical solar installations are complete within one to three days, depending on your property's features, installation

complexity, and whether any unexpected delays arise.

How much does a solar system cost?

A small system for a cabin or RV might cost around \$3,000 to \$7,000, while a full-scale home system could range from \$15,000 to \$50,000 or more. This includes solar panels, a battery bank, an inverter, a charge controller, wiring, and mounting hardware.
