

SolarMax Energy Systems

Cost of Home Energy Storage

Overview

How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

How much does a battery cost on EnergySage?

The median battery cost on EnergySage is \$1,037/kWh of stored energy. Incentives can dramatically lower the price of batteries, but the 30% federal tax credit ends after Dec. 31, 2025. You can go off-grid with batteries, but it requires a lot of capacity and money, so most homeowners don't go this route. What exactly are home batteries?

.

How are battery energy storage costs forecasted?

Forecast procedures are described in the main body of this report. C&C or engineering, procurement, and construction (EPC) costs can be estimated using the footprint or total volume and weight of the battery energy storage system (BESS). For this report, volume was used as a proxy for these metrics.

How much does a home backup battery cost?

Home backup batteries store electricity for later use and can be used with or without solar panels. The median battery cost on EnergySage is \$1,037/kWh of stored energy. Incentives can dramatically lower the price of batteries, but the 30% federal tax credit ends after Dec. 31, 2025.

What is the current cost of storing energy per kWh?

The current cost of storing energy per kWh is \$1000 / kWh. Additionally, by

using the to pump water in the water tank.

What is energy storage?

The ability to store energy for days, weeks, or months to compensate for a longer-term supply disruption or seasonal variability on the supply and demand sides of the energy system (e.g. storing heat in the summer to use in the winter via underground thermal energy storage systems).
