Cuba Energy Storage 2025

Overview

What's going on with Cuba's energy crisis?

Havana (EFE).- Cuba has endured 12 months of a full-blown energy crisis marked by blackouts lasting up to 20 hours a day, four nationwide power outages, repeated breakdowns at power plants, a paralyzed economy, and growing social frustration. Experts warn that there is little prospect of improvement in the near future.

How is Havana tackling the Solar Crisis?

Havana's main strategy to address the crisis is an ambitious solar energy program developed with Chinese support. The plan aims to build 92 solar parks nationwide, with an installed capacity of around 2,000 megawatts. So far, 25 parks have been connected to the SEN, in line with government targets.

Why are power outages a problem in Cuba?

Power outages have become the top concern for Cubans, who struggle to preserve food, conduct banking or bureaucratic tasks, charge electric motorcycles and phones, and carry out household chores. Many wake up in the early hours of the morning, when electricity briefly returns, to cook, iron, or pump water.

What happened to Cuba's oil-fired power plants?

Cuba's oil-fired power plants, already obsolete and struggling to keep the lights on, reached a full crisis last year as oil imports from Venezuela, Russia and Mexico dwindled. Reporting by Marc Frank; Additional reporting by Alien Fernandez; Writing by Aida Pelaez-Fernandez; Editing by Lisa Shumaker, Nick Zieminski and David Gregorio.

How long does it take to restore power in Havana?

In Havana, home to 2 million residents, authorities said they were working to

start major power plants. This was the fourth time in less than a year that the national grid collapsed. In the past, it has taken two to three days for service to be fully restored.
