

SolarMax Energy Systems

Cuba s photovoltaic energy storage policy

Overview

The agreements include the arrival of solar panels and battery storage systems, although, as previously explained, only four of the 55 facilities planned for 2025 will have energy storage, which limits their contribution outside of daylight hours and presents technical challenges for this massive introduction of solar generation. Where can solar power be harnessed in Cuba?

Also included in the project works is the construction of two solar photovoltaic power plants in Las Tunas Province in Cuba's eastern region, where flat, unshaded terrain affords an optimal environment for harnessing solar energy.

What is Cuba's energy policy?

These aims are the cornerstone of Cuba's energy policy adopted in 2014: to reduce the consumption and import of fossil fuels, lower electricity generation costs and help mitigate the effects of climate change.

Does Cuba rely on fossil fuels?

Cuba's power system is currently heavily reliant on fossil fuels. In 2022, fossil fuels accounted for about 95% of electricity generation, and about 48% of the fossil fuels used were imported, putting the country at high risk of price shocks and supply shortages.

What does the EDF report tell us about Cuba's electric grid?

The report builds on a previous report published by EDF in 2017. That report, similar to this one, provided information on Cuba's electric grid and recommended paths forward.

Is Cuba facing a severe economic crisis?

Compounding these problems, Cuba is facing a severe economic crisis, with rising inflation, decreased exports, and the introduction of austerity measures. Overcoming these energy challenges amidst the economic crisis will be extremely difficult.

How much does a 1 KW generator cost in Cuba?

At state-run Copextel retail stores, a basic 1 KW generation module costs 2,551 MLC, pegged to the US dollar. The average salary in Cuba is 4,648 pesos (approximately \$38.70) based on the official exchange rate of 120 pesos to one dollar.

Cuba's photovoltaic energy storage policy

The Cuban government promises solar energy, but without ...

The plan aims for one thousand megawatts of solar energy by 2025, but without installed batteries, which prevents meeting nighttime demand and limits its effectiveness ...
