

## SolarMax Energy Systems

# Cuban base station communication equipment power generation

## Overview

---

What percentage of Cuba's electricity is generated by power plants?

However, in 2021, 59.9% of Cuba's electricity is still generated by power plants. Power plants: between obsolescence and a "lost" investment of 1.2 billion euros. Only thermal generation is able to meet national consumption needs in the short-term.

Who provides bagasse power generation services in Cuba?

any providing bagasse power generation services in Cuba. It is staffed with various British professionals and its principal shareholder is the Esencia Group, a larger British company working directly with Cuba on tourism and energy.<sup>90</sup> Havana Energy partnered with Zerus in 2012 in an agreement to build five 30 MW biomass power plant.

Do gensets run in Cuba?

He explained that gensets used in Cuba run on diesel and fuel. The former cover peaks in high demand and supply electricity in the case of faults or maintenance of the larger power generating plants; while the latter form part of the system's basic electricity generation. How many gensets are there in Cuba?

.

How is electricity used in Cuba?

Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. of total generation.

What is Cuba's generating capacity?

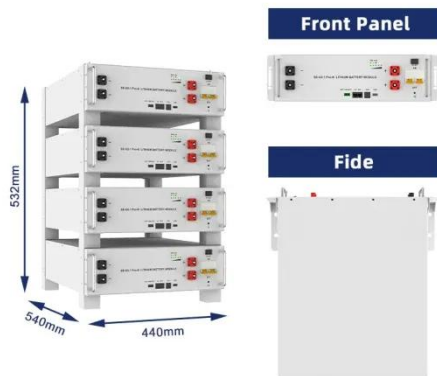

Cuba's capacity is in distributed generation systems. Of 5,602 MW generating

capacity in 2009, 2,436.7 MW capacity, or 43% of the total, was in distributed systems—fuel oil, diesel, and nickel industry generators.<sup>95</sup> Distributed generation in the country is discussed in more detail below in “Transmissi.

How will the energy transition work in Cuba?

Cuba will require a combination of state subsidies, progressive tariffs based on consumption, more flexible legislation to attract foreign investors, and possibly offer its own resources and assets to finance the energy transition. Cuba already uses a progressive rate, but still subsidizes 89% of residential customers.
