

## SolarMax Energy Systems

# Cyprus has wind and solar complementary communication base stations

### BASIC APPLICATION

Storage systems have been proven to be "extremely lucrative" for commercial and industrial (C&I) filed.

## Overview

---

Can a long-term energy planning model be used in Cyprus?

In order to examine options for economically optimal deployment of renewable energy in Cyprus under different scenarios, and to understand the potential impact of key policy decisions on the power generation mix, a long-term energy planning model of the current power system in Cyprus was developed.

How much solar energy does Cyprus have?

Cyprus is also characterized by an abundant solar energy resource across the whole year: the average global solar can reach 2000 kWh/m<sup>2</sup>. Wind energy is instead quite limited over the island of Cyprus, with an annual average wind speed below 4 m/s in the majority of areas.

How will Cyprus achieve a higher share of renewables?

Cyprus has set out to attain a higher share of renewables, and this roadmap helps to assess optimal investment strategies in the power sector. Solar PV and wind power will play a major role in the roadmap to 2030. Roadmap findings will play an important role to revise existing energy policies and develop new ones.

What percentage of Cyprus' electricity will come from renewables in 2030?

Based on this analysis, between 25% and 40% of Cyprus' electricity supply can come from renewables in 2030, in the economically optimal mix. Solar PV is the predominant renewable energy technology in all scenarios, supplying between 15% and 27% of the electricity consumed in Cyprus in 2030.

Will RETS contribute to Cyprus' electricity mix in 2030?

RETs have the potential to provide a substantial contribution to the electricity mix of Cyprus. Based on this analysis, between 25% and 40% of Cyprus' electricity supply can come from renewables in 2030, in the economically

optimal mix.

Why does Cyprus have a high electricity price?

Cyprus has one of the highest electricity prices in Europe, due to high reliance on liquid fuel for power generation. However, a major transition is imminent for electricity supply. On one hand, indigenous natural gas discoveries are to be developed in the coming years.
