

SolarMax Energy Systems

Czech energy storage power station investment amount

Overview

The €279 million (7 billion CZ/US\$304 million) of funding will be in the form of direct grants to build energy storage projects totalling at least 1,500MWh of capacity. Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.

Why is Czech energy-accumulation so expensive?

According to the report, the main reason is the regulatory framework biased in favor of classical energy models. The Czech Republic is no exception. It is fair to say that none of available energy-accumulation technology is perfect yet, and cost-effectiveness can be reached under specific conditions only.

Why is the Czech energy sector important?

Minister of Environment Petr Hladik noted that this strategic vision for the Czech energy sector is crucial for long-term planning and investments. It aims to reduce greenhouse gas emissions by 55% by 2030 through increased RES production, energy efficiency, and the complete phase-out of coal by 2033.

Does Czech Republic have a national energy and Climate Plan?

The Czech Republic submitted its updated National Energy and Climate Plan to the European Commission on January 8, 2025, featuring significant increases in renewable and nuclear energy capacity. The Czech Ministry of Industry and Trade and the Ministry of the Environment worked together to align with EU decarbonisation targets.
