

## SolarMax Energy Systems

# Czech home energy storage system manufacturer

## Overview

---

Leading Czech manufacturers of advanced Li-Ion batteries (OIG Power, Fitcraft, GWL Power, A123 Systems, EV Battery, HE3DA /Magna Energy Storage) successfully compete in the residential sector and in smaller commercial installations. Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

Why is the battery storage industry growing in Czechia?

The Battery Storage industry in Czechia is growing rapidly, driven by the country's commitment to renewable energy and sustainability. Key considerations include the regulatory framework, which supports the integration of battery storage systems into the energy grid.

Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

Will the Czech solar market shift towards larger-scale solar and storage market?

With the residential segment dominating the storage market in the Czech Republic in the coming years, the Czech Solar Association (Solární Asociace) also pointed out that it expects a shift towards larger-scale solar and storage market, given the potential of energy storage in balancing the grid and optimizing energy structure.

Why is Czech energy-accumulation so expensive?

According the report, the main reason is the regulatory framework biased in favor of classical energy models. The Czech Republic is no exception. It is fair to say that none of available energy-accumulation technology is perfect yet, and cost-effectiveness can be reached under specific conditions only.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.
