

SolarMax Energy Systems

**Do you have new photovoltaic
solar panels**

Overview

Do solar panels need to be replaced?

Roofs with solar panels should be in good shape, but there may come a time when the roof needs replacing. If a roof with solar panels needs to be replaced, both the panels and the mounting hardware must be uninstalled and reinstalled. This work is often done by the solar panel installer, but sometimes the roofing company can take care of it.

Can you install solar panels on a new roof?

Roofing work: After the panels are safely removed, roofing work can proceed as it would on any roof without solar panels. It's important to ensure that the new roof is compatible with solar panel reinstallation. Panel reinstallation: Once the roof work is complete, the solar panels need to be reinstalled.

Do solar panels save money on energy costs?

If you own your new home's solar panels outright, then yes, you will save money on energy costs. How much you save will depend on the amount of solar power you generate, local utility rates, and how much energy the utility pays you for when you return it to the power grid.

Do solar panels need to be reinstalled?

This foresight prevents the need for a disruptive and potentially costly process of removing and reinstalling solar panels when the roof eventually requires replacement. The size, shape and slope of your roof impact the efficiency of solar panels. South-facing roofs with a slope between 15 and 40 degrees often give the most optimal performance.

Should you get a free roof replacement with solar panels?

It's important to address the notion of free roof replacement with solar panels. A small number of companies may advertise free or no-cost roof replacements with solar panels thanks to partnerships with roofing companies. However, it's

important to do your research when considering any such offer.

Is buying a home with solar panels the right move?

Currently, solar power accounts for just 3.9 percent of total U.S. electricity generation, but that number is rapidly growing. So is buying a home with solar panels the right move for you?

Well, that depends on some key factors.
