Overview

Cyprus approves law to protect solar energy self-consumers and develop storage infrastructure, addressing energy curtailment and grid stability challenges. Can I use photovoltaic systems to harvest solar energy in Cyprus?

Using photovoltaic systems to harvest the solar energy in Cyprus is a no-brainer. Learn how you can save € with solar panels via the Net Metering scheme Using photovoltaic systems to harvest the solar energy in Cyprus is a no-brainer. Learn how you can save € with solar panels via the Net Metering scheme.

Why should Cyprus invest in solar panels?

Furthermore, Cyprus solar panels contributes to energy independence, reducing the island's reliance on imported fossil fuels and enhancing its energy security. Economically, the solar industry creates jobs, stimulates local economies, and attracts investment, fostering sustainable growth and development.

How much energy does a PV system produce in Cyprus?

The energy produced in Cyprus from 1 kW PV system is estimated at 1650 kWh per year. From PV projects we have already installed in Cyprus we have seen that, in many cases, the energy produced is much higher. Examples of energy savings from 3, 4 and 5 kW PV systems for their first year of operation can be found in the table below.

How many energy storage applications have been approved in Cyprus?

The Cyprus Energy Regulatory Authority (CERA) representatives reported establishing a regulatory framework for energy storage in 2019, followed by market rules approval in 2021. The Cyprus Transmission System Operator has received 13 storage applications totaling 224 megawatts capacity, with eight applications processed and five under review.

Why does Cyprus waste so much energy?

AKEL MP Costas Costa characterised Cyprus as “the only country in the world where thousands of megawatt-hours go unused due to lack of centralised green energy storage systems,” adding: “During the day we waste megawatt-hours because we lack storage, and at night we are one step away from blackouts.”
