

## SolarMax Energy Systems

# Does the battery cabinet produce batteries

## Overview

---

What is a battery cabinet?

Battery cabinets are a convenient storage solution that encourages staff to maintain the correct handling and storage procedures. By charging and storing batteries in the one location, you are reducing the likelihood of batteries being lost, stolen, damaged or left in unsafe conditions (such as outdoors).

Why should you have a battery cabinet?

For example, dropping a battery or leaving it in a hot location can result in irreversible damage to the battery cell, which can lead to ignition or explosion. Providing a battery cabinet can reduce these risks by encouraging safe handling and storing practices within your team.

How many man batteries can be produced a year?

In the current expansion stage, 50,000 battery packs per year can be produced there, with a possible maximum of 100,000 units – the exact figure depends on the respective market situation. MAN uses NMC cell chemistry (nickel-manganese-cobalt) in its batteries, which has been specially adapted to the operation of commercial vehicles.

What makes man a state-of-the-art battery manufacturer?

But it is not just the batteries produced in Nuremberg that are state-of-the-art – the production process also boasts a technological highlight: MAN is implementing modular production – i.e. a system without a conveyor belt or cycle that can handle different product variants and be easily adapted to new variants.

How many batteries will be built in 2025?

Over 50 manual and automated assembly stations and seven test benches for quality assurance will be installed on an area of 17,000 square metres. The

installation of the first production systems has already begun. From April 2025, up to 50,000 batteries per year will be built in an initial expansion phase.

Did the Bavarian Minister-President miss the start of battery production in Nuremberg?

Historic events deserve to be celebrated. And so, neither the Bavarian Minister-President Dr. Markus Söder nor the Bavarian Minister of Economic Affairs, Regional Development and Energy Hubert Aiwanger, missed the opportunity to attend the start of battery production in Nuremberg.
