

## SolarMax Energy Systems

**Does the hospital also have energy storage projects**

## Overview

---

What can hospitals do to save energy?

Hospitals should consider installing smart lighting systems, invest in green energy, solar panels and other clean energy generators. Some health systems even generate energy from the onsite incinerators they use to dispose of waste.

Why do hospitals use a lot of energy?

Hospitals use a lot of energy to provide safe and effective care for patients all day, every day. From operating medical equipment to powering air. Leading on writing minimum regulations for energy efficiency, renewable energy and electric vehicle charging with the National Construction Code of Australia.

How much do hospitals spend on energy costs?

Frees resources for patient care. Hospitals spend \$3.16 per square foot on energy costs each year on average, and this amount is climbing steadily. These costs can have a huge impact on a hospital. For example, a 237,400-square-foot, 75-bed hospital spends about \$9,800 per bed on energy costs—about \$735,000 per year.

Can a microgrid help a healthcare facility save energy?

As the first of its kind, this project demonstrated the ability of a microgrid to support and sustain the functions of a healthcare facility and to overcome barriers to its deployment. As a result, Richmond Medical Center stands to save an additional 2.63 MWh of energy per year, resulting in annual savings as high as \$394,000.
