

## SolarMax Energy Systems

# Dominican solar photovoltaic container farming

## Overview

---

Why did the Dominican Republic build a photovoltaic plant?

The energy deficit and dependence on fossil fuels drove the Dominican Republic to step up its commitment to clean energy. DOMINION took on the task of building the photovoltaic plant in this Caribbean country, with an offer that included everything from the design and construction of the plant to its operation and subsequent maintenance.

How many solar projects are there in the Dominican Republic?

The solar energy projects in the Dominican Republic began operating in 2016. Currently, there are 11 definitive concessions for the generation of PV electrical energy. These projects cover an installed capacity between 3 MW and 58 MW (see Fig. 5.). Next, a brief inventory first of its kind in the country.

What is the installed capacity of photovoltaic energy in the Dominican Republic?

The installed capacity of photovoltaic energy in the Dominican Republic is 0.43 GW. 5. Photovoltaic energy in the Dominican Republic is increasing rapidly and could 1. Introduction currently a topic of high priority and relevance worldwide. Among these strategies are those that lead to the reduction of greenhouse gases (GHG) .

Is solar energy a viable resource for the Dominican Republic?

High solar potential, along with integrating efficiencies and economies of scale, can make solar energy a viable resource for the Dominican Republic. Similarly, wind energy has strong potential, particularly in the southwest.

What is the future of photovoltaic energy in the Dominican Republic?

Finally, the future perspectives of photovoltaic energy in the country are presented, based on current studies of projects that could be installed in the near future. It is estimated that the Dominican Republic could exceed 1.5 GW

installed by 2030.
