

## SolarMax Energy Systems

# Double-glass module manufacturing and installation group

## Overview

---

What is a double glass (Dual Glass) solar panel?

A double glass (Dual Glass) solar panel is a glass-glass module structure where a glass layer is used on the back of the modules instead of the traditional polymer backsheet. Double glass solar panels were originally heavy and expensive, but the lighter polymer backing panels gained most of the market share.

Are bifacial double-glass modules a good choice?

There has been a notable shift from the initial single-facial single-glass modules to bifacial double-glass modules. Double-glass modules, with their performance in the face of salt mist, high temperatures and high humidity, have won the market's favour. However, this trend is not without its risks.

What changes have been made in glass-glass modules?

In the case of Glass-Glass modules, an important change has been made by replacing EVA with polyolefins as an encapsulating substance. This is due to the free radicals generated during the EVA cross-link lamination process. Traditional backsheets are somewhat permeable to free radicals, but the double glass module is not.

How much power does a bifacial glass/glass module produce?

490 - 505 W Max. Efficiency : 22.8 %  
Bifacial Module Application Up to 25 %  
higher electricity yields due to action bifacial glass/glass modules on both sides.  
Better Performance Our modules perform better on su timized  
temperature coefficient.  
Excellent Low Light Performance Our modules can also provide higher power ou.

Can PV module glass be used with metal frames?

PV module glass should never be in direct contact with metal frames, as even small vibrations and movements can cause cracks over time. Additionally,

debris such as sand and dust can become trapped between the frame and glass, leading to abrasion and micro-fractures.

Can 2mm glass be used in PV modules?

As per NREL, though, 2-mm glass in PV modules does not yet meet the criteria for fully tempered safety glass. Other solutions may include increasing the surface compression in thinner glass to improve its fracture resistance.
